Kiran Sundhesha

Data Analyst | Business Intelligence Specialist

kiransundhesha56@gmail.com | Ahmedabad, Gujarat, India (Open to Remote) | LinkedIn | GitHub | Portfolio Website

PROFESSIONAL SUMMARY

Detail-oriented, commercially focused Entry-Level Data Analyst with strong expertise in Power BI, Advanced Microsoft Excel, and Data ETL Pipelines. Experienced in transforming unorganized transactional data into normalized star-schema models, writing robust DAX measures, and designing high-impact executive dashboards that uncover revenue opportunities and optimize operational efficiency. Ready to contribute on Day 1.

TECHNICAL SKILLS

Business Intelligence: Power BI, DAX Expressions (Time Intelligence, RANKX), Star Schema Modeling, Power Query ETL, Executive Dashboards.

Spreadsheet Modeling: Microsoft Excel, Power Query Data Merging (No-VLOOKUP Pipelines), Excel Data Model (Power Pivot), Advanced PivotTables & Synchronized Slicers, Financial Margin Modeling.

Core Analytics: KPI Formulation, Variance Analysis, Supply Chain Metrics, Customer Cohort Diagnostics, Exploratory Data Analysis (EDA).

FEATURED CASE STUDIES & PROJECTS

FMCG Retail Channel Profitability & Margin Analysis

Advanced Excel & Power Query ETL

- Engineered an automated data pipeline using Power Query to merge 150+ raw sales, cost, and discount records from local CSVs without volatile lookup formulas.
- Architected a relational Excel Data Model (Power Pivot) to dynamically calculate Gross Margin, Logistics Costs, and Net Margin across Tier-1 Indian cities.
- Designed an interactive executive dashboard with synchronized slicers, uncovering that aggressive promotional discounts caused Modern Trade channels to operate at a net loss compared to highly profitable traditional Kirana stores.

Quick-Commerce Operations & SLA Performance Dashboard

Power BI & Advanced DAX

- Built an end-to-end performance matrix analyzing delivery times, customer ratings, and order values for a simulated 10-minute grocery delivery model.
- Authored custom DAX measures (CALCULATE, DIVIDE) to track Service Level Agreement (SLA) breaches for orders exceeding 15-minute operational thresholds.
- Deployed advanced RANKX logic to dynamically rank regional distribution hubs from worst to best based on SLA breach percentages and operational efficiency.

EDUCATION

MCA – Master of Computer Applications Completed 2026

BCA – Bachelor of Computer Applications Completed 2024
