India • Open to Remote & Relocation

PROFESSIONAL SUMMARY

Detail-oriented, commercially focused Entry-Level Data Analyst with strong expertise in **Power BI**, **Advanced Microsoft Excel**, and **SQL**. Experienced in transforming unorganized transactional data into normalized star-schema models, writing robust DAX measures, and designing high-impact executive dashboards that uncover revenue opportunities and optimize operational efficiency. Ready to contribute on Day 1.

TECHNICAL SKILLS

Business Intelligence:	Power BI, DAX Expressions (CALCULATE, Time Intelligence), Star Schema Modeling, Power Query ETL, Executive Dashboards.
Spreadsheet Modeling:	Microsoft Excel, Dynamic Arrays (XLOOKUP, FILTER, UNIQUE), PivotTables & Slicers, Nested IFS, What-If Scenario Analysis.
Databases & Querying:	SQL (MySQL / PostgreSQL), Multi-Table JOINs, Aggregate Functions, GROUP BY, HAVING, Subqueries, Data Hygiene.
Core Analytics:	KPI Formulation, Variance Analysis, Supply Chain Metrics, Customer Cohort Diagnostics, Exploratory Data Analysis (EDA).

FEATURED CASE STUDIES & PROJECTS

IPL Franchise Valuation & Player ROI Analytics

Power BI & DAX

Moneyball Sports Analytics & Capital Allocation Dashboard

- Modeled total league spend of ₹1,192 Crores across 10 franchises using clean Power Query ETL workflows.
- Architected 14+ custom DAX measures (including `Cost_Per_Run_₹` and `Cost_Per_Wicket_₹`) to normalize bidding efficiency.
- Identified 18+ high-impact "Draft Steals" vs overpriced salary cap drains using dual-pillar 4-quadrant scatter matrices.

Enterprise Retail, Supply Chain & Marketing Analytics Suite

Advanced Excel

Operational Command Center & What-If Scenario Simulator

- Consolidated 185K+ rows of sales and inventory records into an automated multi-tab Excel financial engine.
- Structured dynamic XLOOKUP models and nested IFS calculations to detect regional SLA breaches and courier RTO costs.
- Decreased simulated stockout risk by 35% through dynamic reorder threshold alerts and variance heatmaps.

Customer Retention & Cohort Lifetime Value (LTV) Model

SQL & Relational Databases

Transactional Querying & Revenue Growth Analysis

- Authored complex SQL queries utilizing INNER/LEFT JOINs and aggregate functions across customer and order tables.
- Segmented repeat buyers, calculating average order frequency and pinpointing drop-off points within 45-day intervals.

EDUCATION

BCA – Bachelor of Computer Applications Completed 2024

MCA – Master of Computer Applications Completed 2026
